

Single Master Hero Banner Specification Guide

Design specification for the 1 single master banner image uploaded by Admin to serve Desktop, Tablet & Mobile.

1. Single Master Image Specification (Universal 1-Pic Setup)

The Admin uploads **1 single image file** per banner. Designers should create the artwork using these exact universal master dimensions:

Parameter	Master Value Specification	Designer Guidance
Master Resolution	1920 px × 600 px	Creates 4K crispness on Desktop & Retina screens
Aspect Ratio	16 : 5 (3.2 : 1 Ratio)	Ultrawide landscape aspect ratio
Safe Central Content Zone	1200 px × 450 px (Centered Region)	Place all critical text & key cookie graphics within this inner box so nothing gets cropped on smaller screens
Minimum Acceptable Resolution	1600 px × 500 px	Lowest recommended resolution to avoid pixelation

2. How the 1 Single Master Image Renders Across Viewports

When the 1 master image (`1920 × 600 px`) is uploaded, the storefront automatically scales it seamlessly:

- **Desktop Viewport (Large Screens):** Displays full width at up to `420 px` height. All 1920 px width is visible.
- **Tablet Viewport (Medium Screens):** Scales down proportionally to `360 px` height.
- **Mobile Viewport (Smartphones):** Scales responsively to `260 px` height. Because text/graphics are inside the **Safe Central Zone**, the artwork remains 100% visible and sharp.

3. Export Settings & Compression Standards

Export Option	Setting Requirement
File Format	.WebP (Recommended) or .PNG / .JPG
Max File Size	< 250 KB for ultra-fast instant web load
Color Space	sRGB (Prevents crimson color distortion)

DPI / PPI	72 DPI (Web standard)
